The Datasets folder contains the following files:

1. **Relevant HCES data:** Contains datasets derived from the Household Consumption Expenditure Survey (HCES), focusing on relevant variables across levels 2, 3, 5, and 15.
2. **Final data - HIG (re-coded):** The comprehensive final dataset for analysis. It features renamed variables, includes relevant columns added for analysis (including NSS-retrieved variables), and has a second tab containing a codebook with descriptions, options, and definitions for each variable.
3. **HIG_asset_cons:** An updated dataset built upon the post-survey data, with additional columns for analysis, incorporating asset-class and consumption data from HCES.
